

This new technology of XM Satellite Radio especially the weather & traffic service is very beneficial to me and I know to others too. With the price of gasoline now a days I would know what is happening ahead of me when I am travelling ahead of time so I can plan another route if there is traffice where I am headed. I would like to see more technology like this everyday it really helps plus the non stop music also help when I am in a long drive it keeps me up and entertained.

Please do not change any of the services of all satelite radio.

Sincerely yours,

B. Alamon
